## GUJARAT TECHNOLOGICAL UNIVERSITY <br> BE - SEMESTER-V (NEW) EXAMINATION - WINTER 2022

Subject Code:3150703
Date:09-01-2023
Subject Name:Analysis and Design of Algorithms Time:10:30 AM TO 01:00 PM

Total Marks:70 Instructions:

1. Attempt all questions.
2. Make suitable assumptions wherever necessary.
3. Figures to the right indicate full marks.
4. Simple and non-programmable scientific calculators are allowed.
Q. 1 (a) Sort the best case running times of all these algorithms in a non-decreasing order.
LCS, Quick-Sort, Merge-Sort, Counting-Sort, Heap-Sort, Selection-Sort, Insertion-Sort, Bucket-Sort, Strassen's Algorithm.
(b) State whether the statements are correct or incorrect with reasons.
5. $\mathrm{O}(\mathrm{f}(\mathrm{n}))+\mathrm{O}(\mathrm{f}(\mathrm{n}))=\mathrm{O}(2 \mathrm{f}(\mathrm{n}))$
6. If $3 n+5=O\left(n^{2}\right)$, then $3 n+5=o\left(n^{2}\right)$
(c) Explain asymptotic analysis with all the notations and its mathematical inequalities.
Q. 2 (a) What is the use of Loop Invariant? What should be shown to prove that an algorithm is correct?
(b) Apply LCS on sequence <A,B,A,C,B,C> for pattern <A,B,C>
(c) Write and explain the recurrence relation of Merge Sort.

## OR

(c) Perform the analysis of a recurrence relation $T(n)=2 T\left(\frac{n}{2}\right)+\theta\left(n^{2}\right)$ by drawing its recurrence tree.
Q. 3 (a) Consider the array $2,4,6,7,8,9,10,12,14,15,17,19,20$. Show (without actually sorting), how the quick sort performance will be affected with such input.
(b) "A greedy strategy will work for fractional Knapsack problem but not for $0 / 1^{\prime \prime}$, is this true or false? Explain.
(c) Apply Kruskal's algorithm on the given graph and step by step generate the MST.

FIG:1
Graph G(V,E)

OR
Q. 3 (a) Consider an array of size 2048 elements sorted in non-decreasing order. Show how the Binary Search will perform on this size by analysis of its recurrence relation. Derive the running time.
(b) Explain the steps of greedy strategy for solving a problem.

04
(c) Apply Prim's algorithm on the given graph in Q. 3 (C) FIG: 1 Graph $\mathrm{G}(\mathrm{V}, \mathrm{E})$ and step by step generate the MST.
Q. 4 (a) Given is the S-table after running Chain Matrix Multiplication algorithm.

Calculate the parenthesized output based on PRINT_OPTIMAL_PARENTHESIS algorithm. Assume the matrix are names from $\mathrm{A}_{1}, \mathrm{~A}_{2}, \ldots ., \mathrm{A}_{\mathrm{n}}$

(b) Explain states, constraints types of nodes and bounding function used by backtracking and branch and bound methods.
(c) Apply the algorithm to find strongly connected components from the given graph.

OR
Q. 4 (a) Consider a Knapsack with maximum weight capacity M is 7, for the three objects with value $<3,4,5>$ with weights $<2,3,4>$ solve using dynamic programming the maximum value the knapsack can have.
(b) Explain the Minimax principle and show its working for simple tic-tac-toe game playing.
(c)

Given is the DAG, apply the algorithm to perform topological sort and show the sorted graph.

Q. 5 (a) When can we say that a problem exhibits the property of Optimal Substructure?
(b) Create an example of string P of length 7 such that, the prefix function of KMP string matcher returns $\pi[5]=3, \pi[3]=1$ and $\pi[1]=0$
(c) Explain the 3SAT problem and show that it is NP Complete.

## OR

Q. 5 (a) Explain Over-lapping Sub-problem with respect to dynamic programming.
(b) Show that if all the characters of pattern P of size m are different, the naïve string matching algorithm can perform better with modification. Write the modified algorithm that performs better than $\mathrm{O}(\mathrm{n} . \mathrm{m})$.
(c) Explain with example, how the Hamiltonian Cycle problem can be used to solve the Travelling Salesman problem.
