		GUJARAT TECHNOLOGICAL UNIVERSITY				
D	OIPLO	MA ENGINEERING – SEMESTER – 4(NEW) • EXAMINATION – SUMMER 2018				
Su	ibjec	t Code: 3340501 Date: 03-May-2018				
Su	ibjec	t Name: Process Heat Transfer				
Ti	me:	10:30 AM TO 01:00 PM Total Marks: 70				
Ins	structi	ons:				
	1. 2	Attempt all questions. Make Suitable accumptions wherever pagescary				
	2. 3.	 Make Suitable assumptions wherever necessary. Figures to the right indicate full marks 				
	 Use of programmable & Communication aids are strictly prohibited. Use of only simple calculator is permitted in Mathematics. 					
	6.	English version is authentic.				
0.1			14			
Q.1		Answer any seven out of ten.	14			
	1.	Define: Insulation.				
	2.	Define: Temperature gradient.				
	3.	State Fourier's law.				
	4.	Define: Conduction and Heat flux.				
	5.	State Newton's law of cooling.				
	6. 7	List out types of Barries.				
	/. 8	Give definition and significance of Prandtl number				
	0. 9	Define: Radiation and Emissivity				
	10	. What is the advantage of using multi effect evaporator over single effect				
	10	evaporator?				
0.2		Differentiate between stande state and wrates du state best transfor	0.2			
Q.2	(a)	Differentiate between steady state and unsteady state heat transfer.	03			
	(2)	Discuss Thermal conductivity and its variation with temperature	03			
	(a)	Explain optimum thickness of insulation	03			
		OR	00			
	(b)) Derive steady state heat conduction through 1-D wall.	03			
	(c)) Derive equation for critical radius of insulation.	04			
		OR				
	(c)	A wall is made of brick of thermal conductivity 1.0 W/(m.K), 230 mm thick.	04			
		It is lined on the inner face with plaster of thermal conductivity 0.4 W/(m.K)				
		and thickness 10 mm. If a temperature difference of 30 K is maintained				
		between the two faces, calculate the heat flow per unit area of wall.				
	(d)) Discuss types of condensation with example.	04			
	(4)	UK	04			
	(u)) Differentiate between dropwise condensation and finit wise condensation.	04			
Q.3	(a)	Give difference between cooler, condenser and chiller.	03			
		OR				
	(a)	Give major disadvantages of double pipe heat exchanger.	03			
	(b)) In a double pipe heat exchanger, hot fluid has temperatures of 140 °C and 85	03			
		"U. Cold fluid has temperatures of 30 "C and 60 "C. Calculate LMTD for				
		COUNTER HOW.				
		UK				

(c) Draw a neat sketch of 1-2 shell and tube heat exchanger.

03

04

		OR	
	(c)	Write a short note on plate type heat exchanger.	04
	(d)	OR	04
	(d)	Give definition and significance of Reynold number and Grashoff Number.	04
Q.4	(a)	Describe Duhring's rule and its importance.	03
	(a)	Compare forward feed and backward feed arrangement for multiple effect evaporator.	03
	(b)	State and explain Kirchhoff's law.	04
	(b)	Discuss concept of black body.	04
	(c)	Derive equation of LMTD for parallel flow.	07
Q.5	(a)	Explain characteristics of liquid for evaporation.	04
	(b)	Explain long tube vertical evaporator.	04
	0	50 mm OD at 393K to air at 293 K. Take value of emissivity as 0.90.	05
	(d)	Explain Weins displacement law.	03
